

# INFERTILITY 101

1 in 8

The number of women in the United States between the ages of 15-44 that are considered infertile.

1

11.9% of women have received any infertility services in their lifetime. (2006-2010 National Survey of Family Growth, CDC)

2

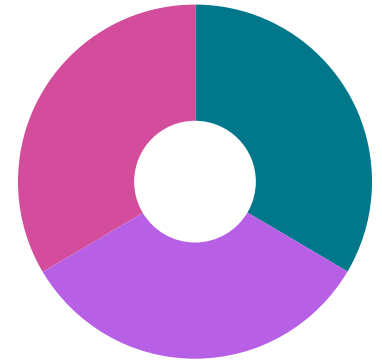

A couple ages 29-33 with a normal functioning reproductive system has only a 20-25% chance of conceiving in any given month (National Women's Health Resource Center).

3

The most recently available statistics indicate the live birth rate per fresh non-donor embryo transfer is 47.7% for ages 22-33. (Society for Assisted Reproductive Technology, 2013)

## FERTILITY IS NOT JUST A WOMENS ISSUE

One-third of fertility issues can be traced back to the female partner, one-third to the male, and one-third to a combination of both partners or unexplained infertility.
